Regarding claims 1-5, 10, the prior art fails to teach in a passive optical network that includes an optical line terminal (OLT) and a plurality of optical network units (ONUs), a method for registration of multiple entities belonging to a specific ONU comprising the steps of: a) checking, by the OLT, if a registration request message received from the specific ONU belongs to a certain grant; and *"b) based on said checking, deciding, by the OLT, to register an entity selected from the group consisting of a user, a group of users and a service and associated with the registration request as either a first entity or an additional entity of said specific ONU, the decision to register including providing a specific Logical Link Identification,,{LLID) to each entity of said specific ONU,"* which is considered in combination with other limitations, as specified, as in the independent claim 1.

Regarding claims 9 and 11, the prior art fails to teach in a passive optical network that includes an optical line terminal (OLT) and a plurality of optical network units (ONUs), a method for registration of multiple entities belonging to a specific ONU comprising the steps of: a) checking, by the OLT, if a registration request message received from the specific ONU belongs to a certain grant; and *"b) based on said checking, deciding, by the OLT, to register an entity selected from the group consisting of a user, a group of users and a service and associated with the registration request as either a first entity or an additional entity of said specific ONU, the decision to register*

including providing a specific Logical Link Identification (LLID) to each entity of said specific ONU, wherein said step of deciding includes deciding that a flags field value is an old value, the method further comprising the step of deleting all previously registered entities for said specific ONU," which is considered in combination with other limitations, as specified, as in the independent claim 9.

Regarding claims 12-18, the prior art fails to teach method for registration of multiple entities belonging to a specific optical network unit (ONU) in a passive optical network that includes an optical line terminal (OLT) and a plurality of ONUs, the method comprising the steps of: a) checking, by the OLT, if a registration request message defined according to the IEEE 802.3 specification and received from the specific ONU belongs to a certain grant; and *"b) based on said checking, deciding, by the OLT, to register an entity selected from the group consisting of a user, a group of users and a service and associated with the registration request as a first entity or an additional entity of said specific ONU,"* which is considered in combination with other limitations, as specified, as in the independent claim 12.

Regarding claim 19, the prior art fails to teach in a passive optical network that includes an optical line terminal (OLT) and a plurality of optical network units (ONUs), a method for registration of multiple entities belonging to a specific ONU comprising the steps of : a) checking, by the OLT, if a registration request message received from the specific ONU belongs to a certain grant; and *"b) based on said checking, deciding, by*

the OLT, to register an entity associated with the registration request as an entity of said specific ONU selected from the group consisting of a first entity and an additional entity; and c) deleting all previously registered entities for said specific ONU," which is considered in combination with other limitations, as specified, as in the independent claim 19.

Regarding claim 20, the prior art fails to teach in a passive optical network that includes an optical line terminal (OLT) and a plurality of optical network units (ONUs), a method for registration of multiple entities belonging to a specific ONU comprising the steps of : a) checking, by the OLT, of a flags field residing inside a registration request message received from the specific ONU; and *"b) based on said checking, deciding, by the OLT, to register an entity associated with the registration request as an entity of said specific ONU selected from the group consisting of a first entity and an additional entity, wherein said step of deciding includes deciding that a flags field value is an old value; and c) deleting all previously registered entities for said specific ONU,"* which is considered in combination with other limitations, as specified, as in the independent claim 20.
